

Configuring the Shopify Integration

How to configure the integration between Noviship and Shopify on the Noviship side
Integrations are configured in the **Selling | Integrations** section

The screenshot shows the Noviship user interface. At the top left is the 'NOVISHIP' logo. To its right is a hamburger menu icon followed by the word 'INTEGRATIONS'. Below the logo, the user profile for 'Noviship' is displayed, including the name 'Eric Pedder', email 'epedder', and contact 'eric@novitraq.com'. A dark sidebar on the left contains navigation options: Search, Customers, Selling (highlighted), Pricing Profiles, Integrations (highlighted), Shipments, Management, and Billing. The main content area is titled 'INTEGRATIONS' and features a table of integration entries. The table has columns for 'Integration' and 'Org'. The first row is a header with a checkbox, the text 'Integration', a sort icon, and the text 'Org'. Below the header is a search bar with the placeholder 'Search...'. The table lists several 'SHOPIFY' integrations, each with a checkbox and a partial organization name. At the bottom of the table, it says 'Showing 1 to 25 of 43 entries'. Below the table are two buttons: 'Add' (blue) and 'Update' (green).

<input type="checkbox"/>	Integration	↑↓	Org
	<input type="text" value="Search..."/>		
<input type="checkbox"/>	SHOPIFY		Gro
<input type="checkbox"/>	SHOPIFY		Eye
<input type="checkbox"/>	SHOPIFY		Zon
<input type="checkbox"/>	SHOPIFY		Will
<input type="checkbox"/>	SHOPIFY		ECC

Creating a new Integration

Click [Add here](#) to create a new integration and select Shopify as the integration type

You will see the configuration page for your new integration and you should enter the information provided by the customer.

Integration Options

There are a number of options you can configure for the Shopify integration.

Carrier Rating Service

Install Carrier Rating Service

Select this option to install a rating service in the Shopify account so that shipping prices can be quoted for customers.

The Carrier Rating Service allows Shopify to connect to the associated Noviship account to obtain quotes for the contents of the customer's shopping basket.

The Shopify account must have the Advanced Shopify Plan to install Carrier Rating.

Order/Paid Monitor

Install Order/Paid Monitor

With this feature activate, when a Shopify order is paid for a matching shipment will automatically be created.

Activating the monitor means that as soon as a customer pays for a Shopify Order, Noviship will create a matching shipment in the customer's account. The shipment will be configured to represent the order with the packages set to the shopping basket and the destination address set to the customer's shipping address.

Fulfillment

Fulfillment Location

form.shopify.fulfillment_location_hint

Fulfill Manifested Shipments

When a shipment is manifested create a Shopify Fulfillment and report the tracking number

If a customer has fulfillment locations configured you can activate the fulfillment option. This will transmit the shipment details to Shopify once the shipment has been manifested. This option relies on the Order/Paid monitor. Only shipments created by the monitor will be transmitted back to Shopify.

Shopify requires that shipments fulfilled be associated with a location so the fulfillment location must be chosen here. If the list is empty you should use the Update action to refresh the data from the Shopify account.

Residential Addresses

Assume Destination Address is Residential

If checked then the residential flag is set on the destination address for created shipments and for rating

Check this option to specify that the destination address is residential (both for rating and for the order monitor). For some carriers this will increase the price due to residential delivery surcharges.

Multiple Packages

Multiple Packages

Create a separate package for each line item in the shopping basket (with the description matching the title and SKU)

Check this option to have each item in the shopping basket represented by a separate Package in the Noviship shipment. This applies to both the carrier rating and the order monitor.

If this option is chosen each package will have the item description and SKU entered in to the package description. Otherwise the order number will be used as the package description.
